

Integrated Accounts Payable Automation

NIVO1 AP Automation is a secure, cloud-based SaaS solution that dramatically reduces labor costs, while improving accuracy and visibility. Intelligent OCR and embedded “invoice training-as-a-service” eliminate the need for manual invoice data entry and coding. NIVO1 seamlessly integrates with your existing JD Edwards system and shares the same look-and-feel. Installations require just a few hours of IT time and implementations typically take as little as 30 business days.

NIVO1 supports B2B payment options like virtual cards and ACH. Earn rebates every month by using the NIVO1 payment processing solution. It also includes a Supplier Portal, enabling suppliers to submit invoices and manage inquiries on their own.

Smart Functionality

NIVO1 provides a native integration with JD Edwards Financials. We’ve already done the hard work to establish and manage the exchange of data between systems. All of the underlying master data from JD Edwards—suppliers, companies, business units, accounts, purchase orders, receipts—are synchronized and available in NIVO1.
